LANDSCAPING CONTRACTOR'S PROTOCOL

1. ACCREDITED LANDSCAPE CONTRACTORS:

1.1 Application for acceptance onto the panel of accredited landscapers:

1.1.1 All landscape contractors wishing to do landscaping work in the Zini River Estate will have to apply by supplying a company profile with records of prior work done in the field and must include a number of photographs indicating workmanship and technical skills. This will be made available to prospective homeowners to choose a landscape contractor.

1.1.2 Home owners may choose to design and plant their own gardens but will be expected to achieve the same level of competence and standard as that of a professional contractor.

2. THE PLAN APPROVAL PROCESS :

A coloured Landscaping Plan is to be submitted for consideration by the Design Review Committee (ZREDRC). A submission fee of R450.00 (excl VAT) is included in the initial submission fee of R2 500 (excl VAT) which is payable to the ZREHOA upon submission of the Building Plan Presentation Drawings. A fee of R450 (excl VAT) is payable for every successive second submission of Landscape Plans after referral. All submitted drawings & subsequent work are to be done in accordance with the design requirements as set out in the design guidelines in this document. All landscape proposals are to comply with the environmental management plan and Landscape Protocol, as prepared by Johan Bodenstein, Indiflora CC.

2.2 Plans submitted that do not meet the basic requirements for plan submissions, as set out in the landscape guidelines, will be referred for improvements to be made. Plans will be referred until it satisfies the ZREDRC.

2.3 The landscaper is to submit one (1) plan for approval by ZREHOA, 2 copies are to be made once approval has been granted. One set of approved drawings is to be issued to the Estate Manager for management records, one to be issued to site for reference purposes – these are to be marked as ZREHOA copies and the other is for the landscaper to use during the implementation of the plan.

2.4 Landscaping may only proceed with approval by ZREHOA. The Contractor shall not deviate from the approved plans without being in possession of amended plans approved by ZREHOA.

LANDSCAPE DESIGN GUIDELINE

1. INTRODUCTION :

Landscaping the garden of a newly constructed house is the last major activity to take place before the development can be called 'home'. Most often it is this important phase of the development that gives the cold stone structure a sense of "life", of being alive. It rounds it off and ties everything together. Landscaping brings in the colour, the texture and the diversity to the development. These are very important elements the landscaper must orchestrate to produce a master piece.

The landscape guideline encourages creative design utilising all of the property space for the design. Landscape designers are encouraged to use "waterwise" concepts and to choose plants from the attached plant list to which their choice is limited. The choice is wide and allows for creative design. The landscaper has the opportunity to increase the biodiversity of species, by creating functional habitat spaces for wildlife by using indigenous plants.

The general landscaping philosophy is one of controlled landscaped areas within the site, which are integral with the design and immediately adjacent to the built structure. It encourages the infusion of natural vegetation (plant and grassland) into the site and in certain instances up to the structure, whilst proposing the "blurring" of property boundaries. A sense of territorial encampment is promoted by site demarcation which is strongly discouraged.

Landscaping of gardens is to be strictly in accordance with the approved plan and should commence within 3 calendar months of occupation of the relevant property. An audit of the landscape installation will take place approximately nine calendar months (allowing for 6 month "growing in" period) after occupation. The owner or landscape contractor will be responsible for the maintenance of the garden prior to the audit.

Should the owner wish to delay construction of his/her dwelling after transfer: an approved landscape plan to prevent erosion and the proliferation of weeds will have to be implemented within 3 months of transfer.

Once the established garden has been accepted, the ongoing maintenance will be the responsibility of the owner or of a landscaping maintenance contractor as appointed by ZREHOA.

The removal of any trees and indigenous vegetation is strictly by application to ZREHOA. Failure to comply in this regard will incur severe penalties.

Enjoy the opportunity to landscape in Zini River Estate.

2. THE DESIGN PROCEDURE :

Zini River Estate aims to maintain a high standard of environmental management. To be certain that all designs of gardens, development and private, comply with these standards the following procedure for the design and creation of gardens has been developed and must be strictly adhered to at all times.

A detailed landscape design drawing (**Hand drawn** or computer generated plans are acceptable) for the proposed garden with a planting plan. The plan must be drawn indicating the following :

- Site location
- Site boundaries
- Building footprint
- Existing contours
- Direction north

- A scale of not more than 1: 200
- Numbering and referencing of plans
- Proposed contour changes
- Hardscaping including water features, paving, retaining structures, garden furniture etc., including materials to be used and the source of the material is to be stipulated.
- Detailed planting plan with:
 - Botanical plant names
 - Positions of plants
 - Density of planting (*Mass planting areas, positions of individual plant species need not be shown but the number of plants per square metre should be annotated*).
- The plan must include a **write up** with reference to the philosophy for the design, the proposed finish, the preparation of the soil prior to planting and the maintenance programme after establishment.

3. **PLANTING PALETTE FOR REHABILITATION AND LANDSCAPING :**

This list serves as a guideline and any endemic indigenous vegetation not included in this list may be used in the garden. NO EXOTIC PLANTS ARE ALLOWED ON THE ESTATE, NOT EVEN IN POTS OR PLANTERS.
